Subject: FW: ACUP Ammendment for Nafion byproduct 2

FYI, see below, wish he would have mentioned something when we were doing the planning.....typical

Well, Christy and I will both be gone the whole week when they would need to be weaned, and PPS falls on the week of 4th of July. Not sure who would do the work.....

It's a diff chemical and may have different effects
Puberty and obesity have been attributed to some pfas.

Would be good to take some pups at end of dosing and keep others for further analysis

I was wrong about study protocol, just has dosing, not termination.

What's the reason to keep it going?

Ex. 5 Deliberative Process (DP)

Not hard to amend study protocol in acup
If they are not around we can figure a way to keep it going.

Well, we might be able to change course, but not sure. This has been part of our planning in terms of scheduling around people's summer vacations etc. The postnatal beginning May 7th is scheduled to be one that terminates on PND2 (what we described in our ACUP/LAPR). So we can do a different chem if you want, but prob too late to completely change the study design. Like, I don't know if Christy/Nicki will even be here when it would be time for weaning or VO/PPS, etc.

Hi Mike,

Could you please let us know the decision of the committee on our ACUP Amendment as soon as possible after your meeting tomorrow? The compound itself is approved and we plan to dose with it next week, but would like to have confirmation on the approved doses so that we have time to prepare the correct dosing solutions.

Cheers,
